

What is your favorite product, and why and how will you improve it?

My favorite product is “NETFLIX”

Netflix is subscription based video on demand streaming platform, it's mission is to “*To entertain the world.*” by providing access to best-in-class TV series, documentaries and feature films Whatever your taste, and no matter where you live.

Why Netflix is my favorite product?

- Tons of high-quality original program and easy to Navigate interface
- Feeling of pleasure I get from watching episode after episode.
- Occasional Binge watching can be a great way to relax and de-stress.

Core Value Proposition of Netflix

- On demand streaming services for TV series, Movies, Documentaries, short films.
- **Original Netflix-content.** Netflix spent a staggering \$13 billion on content in 2018, with around 85% of that going to original shows.
- User no longer tied to the TV and forced to sit through commercials.
- Consumer don't need to pay for content they won't watch. (User can watch any content available on Netflix anytime, anyplace.)
- **Account sharing** with your friends and relatives, 25.6% of Americans share their Netflix account with immediate family member.

User Segmentation :-

User can be defined on the basis of age It will provide us :-

- Affordability of platform
- Time spent on the platform

User Persona :-

Rachel , 25 years, Product Manager

Behaviour :-

She loves to watch Movies and TV shows after office for relaxation and entertainment.

Wants and Needs :-

- Want to watch shows that match her taste.
- Discover new and unexpected content.

Pain Points :-

- Open the platform and finds **so many options** making her overwhelmed what to choice and may cause her to drop off the platform.
- Often need to reach out to friends for recommendation.
- Spending a lot of time deciding what to watch.

Users Based on Age

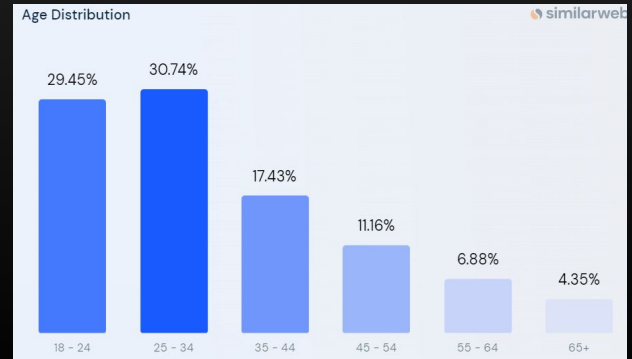

Below 20 years

20-55 years

Above 55 years

- Afford the platform with lesser sharing of account.
- Users wants to stay up to date with streaming content.
- Median age on platform is between 35-44.
- Users who want faster need fulfillment with less efforts

Problems faced by users:-

- Needs friends Recommendation to decide what to watch.
- So many options to choice due to which User spent a lot of time finding what to watch.
- Not able to watch content remotely with friends and family.
- Not able to stream live sports content.

Prioritizing problem based on Reach

Problem	Recommendation	Paradox of choice	No Live Sports Content	Watch with friends
Reach	60% People always don't look for external recommendation.	80% User mostly explore for the content and can't decide what to consume.	40% Live sports content have high demand but the market reach is smaller.	10% Very Few User want to watch content remotely that to rarely.

Problem Statement:-

In what way (action) **content selection process take less time and user may watch content of their choice** (objective) **so that bounce rate of the while content selection decreases** (qualifier) **and engagement on the platform increases** (end result).

Why we need to solve the problem?

- User spent a lot of time to decide what to watch and in many cases gets bored by the process and drops off, resulting in **56.18% bounce rate** of platform.
- Lot of users Avg visit duration is between 5-10 mins.
- Netflix has 1,300 "**recommendation clusters**," which are built through a user's viewing preferences but users mood vary and may like to watch content at according to the mood.

Impact on User

- User would spent less time for selection of choice of content.
- User **engagement** will increase and the interface will be **more interactive**.
- User will more **satisfied**.

Bounce Rate

56.18%

Impact on the Business

- Engagement time increase and the user drop off without consuming content will decrease.
- User who had subscriptions but not using the platform due to paradox of choice will decrease, resulting in **lower churn rate**.
- Increased new user acquisition and high user retention would result in a high average customer lifetime value and, as a result, **increased revenue**.

Pitfalls

Prioritizing Solutions

**Review and Blog**

- User can provide review about the content they watch.
- User can write blogs informing which content to stream like best movies of 2022.

How it solves

- It helps user to make decision more easier and give a sense it is worth watching or not.

**Magic Wand**

- User need to provide few answer of the question asked.
- User would be suggested 3 movies based upon his answers.

How it solves

- It will provide more interactive decision making making and provides a limited choices.

**FlixZone**

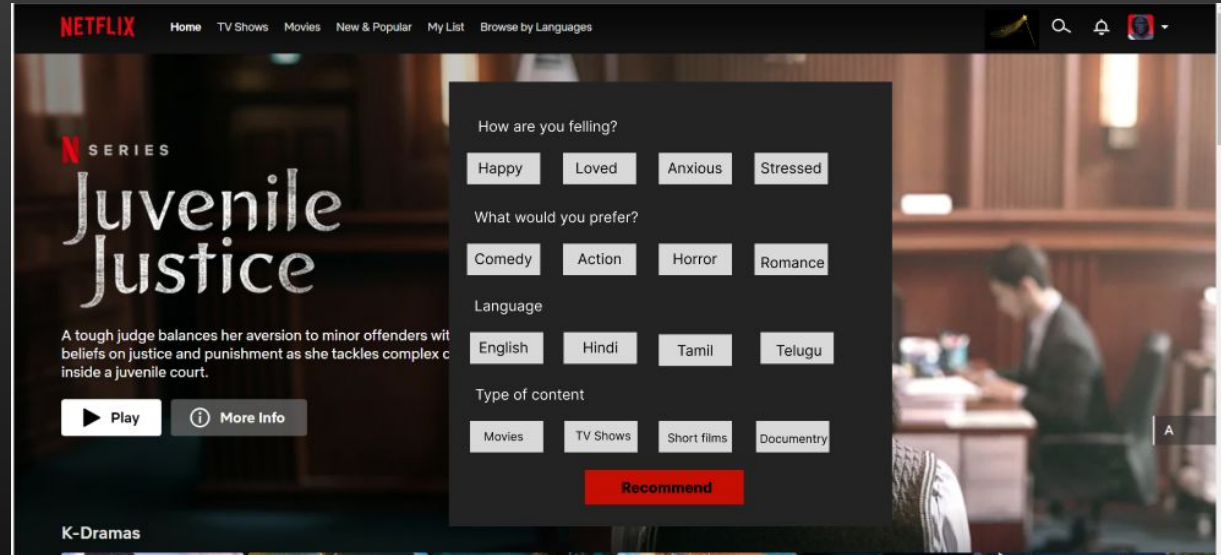

- A social community can be created where can create playlist and follow each other.
- User can share stories after completing the content.

How it solves

- User can watch the recommendation shared by the person they are following.

Solutions	Reach	Impact	Confidence	Effort	Final Score (R*I*C/E)
Review and Blog	60% User who are exploring new content.	3 User can make decision easily by reading review.	2 Reading reviews and blog will take time.	2 Need to design the blogging and review system.	180
Magic Wand	80% Present at the homepage will be targeting user who are looking new content without wasting time.	4 More user-interactive process and suggesting user what to stream.	4 User can decide what to watch in less time.	3 Need to use AI/ML model to recommend suggestions.	426
FlixZone	50% Need to go to the new feature and discover people they want to follow..	3 User can follow their friends, family and others making recommendation of streaming content easier.	2 Time taking process to build a social community.	4 Need to build a community from starting.	75

Solution

Magic wand by clicking on this user
will be directed to answer some
question

How it solves :-

- Provides user recommendation to make a choice.
- Reduces time to search for content.
- Suggest mood based content to user.

- User selects the details and click on recommend.
- The AI/ ML algorithm takes custom parameters from users and existing parameters like previous watch history, ratings & reviews, session time, region, timestamp etc. to show recommendations
- Content is mapped on the basis of moods at the backend and used to match with customer inputs .
